

## **NETWORK SUPPORTED SELECTION OF SERVICE PROVIDER WHEN ROAMING**

### **ABSTRACT**

5

In general terms, one embodiment of the method is for selecting, by a mobile terminal, a roaming service provider in a telecommunications network, when the mobile terminal is roaming. The method has the steps of: communicating between a mobile terminal and current roaming service providers for a current location of the

10 mobile terminal; providing to the mobile terminal, at least upon detecting a registration message from the mobile terminal, respective roaming service provider information associated with the current roaming service providers; selecting, based on the roaming service provider information, a respective one of the current roaming service providers; and connecting subsequent call(s) associated with the mobile

15 terminal using the selected respective roaming service provider. The system implements the method.
